

ABSTRACT OF THE DISCLOSURE

An interactive digital imaging station and method for viewing and e-mailing electronic photos are disclosed. The subject imaging station may comprise a personal computer, a touch screen display, memory card interfaces, a microphone, a credit card reader, a printer, a housing structure, and other components. Customized software and an operating system are preferably provided for use in conjunction with the subject hardware components. Personal electronic images may be transferred from the memory card of a digital camera to the PC of the present subject matter via selected of the provided memory card interfaces. Available memory card interfaces are preferably compatible with presently preferred memory cards, including CompactFlash, SmartMedia, and Memory Stick type memory cards. Stock electronic images may be stored in memory associated with a PC and also be made available to a customer. Ideally, a customer can then view and select certain personal or stock electronic images for sending to a desired recipient via electronic mail. Options may also include printing a copy of a selected digital image. A payment process associated with the subject imaging services is also disclosed.
